Synopsis

Speech-language clinicians who work with children have for a long time had trouble obtaining clinical reference material designed specifically for children. This comprehensive book furnishes the reader with a complete source of information on assessment, treatment, and management strategies for children with developmental apraxia, disarthria, and stuttering.A Brandon-Hill Selection.Special features of this work include:More extensive coverage of several topics including pediatric dysphagia and management of disfluency as a motor speech disorderContributing writers are clinicians actively working with childrenAn innovative chapter on an integrated treatment approach in developmental apraxiaDiscussion of treatment efficacy issues, a particularly timely topicThis timely book integrates neuroanatomical and neurophysiological development issues with speech motor control and motor learning as a basis for treatment planning and service provision. Written by some of the leading clinicians and researchers in the field, it presents a strong theoretical framework to view cases within, but also provides real clinical practical information. Plus, information is presented in a manner that is easily applied by clinicians and students.

Customer Reviews

This was a required text book for a graduate level class. I kept the book, as I do all textbooks and I have actually referred to this one in practicing speech language pathology.

This was very helpful in my graduate study in speech-language pathology. It covers a lot of

disorders and how to treat them.
